When **SAFETY** is on the line

# TRAILERPAL

Each year some 700 people fall from vehicles (HSE fact sheet INDG395) this being the second highest cause of fatalities and injuries in the transport industry. The 'Work at Heights Regulations 2005' pass responsibility to employers to take actions to limit the possibilities of injuries and fatalities.

**TRAILERPAL** is a robust portable fall arrest system which utilises the weight and structure of heavy goods vehicles to hold and support the system whilst loading and unloading takes place.

## TRAILERPAL key features:

**Simple Concept:** No weights, air-bags or netting. Simply utilise the 'drive over plates' to secure the system. Unrestricted trailer bed access.

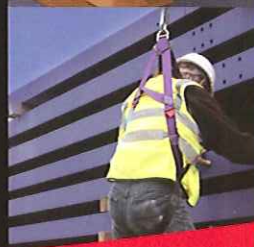

**Quick and Easy:** Full system assembly in approximately 15 minutes only (with the use of a suitable crane).

**Flexibility:** Compatible with all industry standard articulated vehicle configurations with bespoke modifications if required.

**Safe Assembly:** A pre-slung and pre-rigged system allows for ground level assembly.

**Tractor Unit off:** Purchase the optional 'King Pin Attachment' and remove the Tractor Unit.

**Total Package: TRAILERPAL** Limited offer full training, component sales, spares, examination and test, repair and maintenance plus service exchange programs.
